Approved Systems & Software Policy

Growth Manager, Intern Team & Related SitGuru Work

Purpose

SitGuru uses a flexible technology model. Tools named in onboarding materials, internship documents, management guides, or operating procedures reflect the current environment but do not form an exclusive list. SitGuru may approve additional or replacement systems, software, platforms, applications, services, or AI-assisted tools as business needs evolve.

Examples of Approved Categories

- Communication and collaboration
- Project/task management
- Shared files and document collaboration
- Creative design, video, image and content tools
- Social-media publishing and analytics
- Web/product analytics and attribution
- Survey, polling, interview and market-research tools
- Event, QR, lead-capture and community-growth tools
- Ambassador/referral and CRM/community tools
- Productivity, automation and reporting tools
- AI-assisted research, drafting, analysis or creative tools when specifically approved
- Other SitGuru-approved business systems or software

Communication Channel Standard

SitGuru Messaging is the primary company-controlled channel for day-to-day internal operational communication and authorized community communication. Microsoft Teams is primarily used for meetings, video calls, screen sharing, and collaborative working sessions. Outlook is used for formal email when appropriate.

- New tools should not create duplicate sources of truth or move official SitGuru work into personal/unapproved communication channels.
- Approval of a tool never overrides role-based access, confidentiality, privacy, security, professional-conduct, monitoring/audit, or records requirements.

Approval & Access Rules

- Approval may be organization-wide, role-based, project-specific, task-specific, or limited to a pilot/test.
- Approval to use a tool does not grant broader access to SitGuru systems, customer data, confidential records, passwords, payment information, or administrative functions.
- Use only the minimum information needed for the work and follow SitGuru confidentiality, security, licensing, brand, and recordkeeping requirements.
- Customer/Pet Parent PII, credentials, payment data, confidential company information, restricted personnel/intern information, and other sensitive data must not be entered into an external or AI-assisted tool unless SitGuru has specifically approved that use and data handling.
- AI-assisted outputs require appropriate human review before being relied on for public, customer-facing, legal, policy, financial, or business-critical use.
- Team members are encouraged to recommend better tools. New-tool requests should explain the problem being solved, expected benefit, cost if any, data involved, and whether an existing approved tool already meets the need.

How This Policy Applies

This policy supplements SitGuru Growth Manager onboarding materials, Founder management guides, internship syllabi and position descriptions, portal/user guides, project instructions, and other related team documentation unless a specific document or written instruction imposes a stricter requirement. When there is a conflict, the stricter security, confidentiality, university, legal, or access requirement controls.
